

CLOUD POTS Replacement

A cloud-based replacement for aging analog lines; built to keep your fire alarms, elevator phones, and life-safety systems online at a fraction of the current cost.

Stop Paying for Copper

Carriers have hiked analog line rates by up to 1,000% since FCC deregulation. Cloud POTS cuts that cost with flat-rate, predictable pricing.

Always On When It Matters

LTE failover and battery backup keep your fire alarms, elevator phones, and emergency systems live, even when power or internet goes down.

No Equipment Changes

Connects to your existing devices through a standard port. No changes to alarm panels, no new hardware, just a better line behind them.

Up to 8 lines per enclosure | LTE failover + battery backup

How It Works

- 1. Audit Your Lines:** We map every copper-dependent device at your location.
- 2. Install the Enclosure:** TeleCloud installs a compact hardened unit with ATA, LTE router, and battery backup.
- 3. Your Devices Work, Copper Doesn't:** Calls and signals route through the cloud with LTE backup, your legacy devices don't know the difference.

\$35

per line/month

\$20

per router/location/month

\$200

one-time installation fee per location
